MAKE IT POSSIBLE

Palladium
MAKE IT POSSIBLE

MAKING IT POSSIBLE

The simple face mask, lifesaving Personal Protective Equipment (PPE), rapidly became universally sought after in early 2020. Demand surge created market shortages and low quality, even counterfeit goods surged, unfit for purpose and unsafe for the user.

GLOBAL RESOURCING

Palladium's Supply Chain Team experience in medical consumables enables rapid assessment of options to ensure the highest quality at competitive prices from reputable suppliers. We risk manage quality assurance, Medicines and Healthcare products Regulatory Agency (MHRA) directives, specification assessment and compliant sourcing. Palladium's approach is fully cognitive of existing, emerging and planned legislation in this highly-regulated sector, maintaining stringent checks and records for full compliance.

INTERNATIONAL SUPPLY CHAIN

Further to procurement, we arrange bespoke international freight, considering special handling practices such as temperature and humidity control. We provide end-to-end logistics for movement from origin to destination without undue interruption, implementing advanced tracking systems and technologies to ensure the traceability of each product throughout the full supply-chain. The final destination may either be a partner agency, with whom a dedicated team member will liaise, or our own warehousing stockpile to ensure full preparedness.

LEGISLATION

Since early 2020, the team have worked to identify compliant products from complex markets at exceptionally competitive rates. We've assisted clients and partners understand their own needs in order to get the most appropriate PPE – whether it be FFP3 or IIR-rated surgical masks, cone-shaped or fold-flat, with ear-loops or head-ties, or any other possible standard on the market.

We worked with manufactures and suppliers to attain comprehensive evidence of regulatory compliance. including detailed verification of ISO certification, registration with UK and EU regulatory bodies, plus conformance with World Health Organisation specifications. A multitude of new suppliers emerged in response to global demand, so the team's highly skilled application of stringent due diligence practices as well as operating a Quality Management System was critical. This entire process is overseen by a highly-skilled designated Responsible Person for MHRA compliance.

STOCK MANAGEMENT

Palladium warehouse staff are trained in medical consumable and medical device management, tracking European standard (EN) and conformity (CE) markings within our warehouse management system and continually rotating stock to ensure maximisation of shelf life against item expiration.
